

PAR Complex

U.S. AIR FORCE

Two alternative designs/
site locations at JBA

Alternative 3A

Alternative 4

Note: The PAR Program provides for replacement of the two existing VC-25A aircraft at JBA, with an option for up to three replacement aircraft. The Air Force's Proposed Action is the construction and operation of a two-bay PAR Complex. However, until the Air Force decides whether to acquire two or three PAR aircraft, a three-bay hangar option will be considered for the purposes of the EIS. The three-bay hangar footprint is the largest practical option thereby capturing the largest potential for environmental impact. A two-bay option would be wholly contained within a three-bay footprint.
